## Syntax Analysis PART 2

Compiled for: 7th Sem, CE, DDU

Compiled by: Niyati J. Buch

# Topics Covered

- Top Down Parsing
  - [Recursive Descent Parser](#)
  - FIRST and FOLLOW
    - [Compute FIRST](#)
    - [Compute FOLLOW](#)
  - [Construction of a predictive parsing table](#)
  - [LL\(1\) Grammar](#)

# Top Down Parsing

- **Top-down parsing** can be viewed as the problem of **constructing a parse tree** for the input string, **starting from the root** and creating the nodes of the parse tree in preorder (depth-first).
- Equivalently, top-down parsing can be viewed as finding a **leftmost derivation** for an input string.
- At each step of a top-down parse, the key problem is that of **determining the production to be applied** for a nonterminal, say A.
- Once an A-production is chosen, the rest of the parsing process consists of "**matching**" **the terminal symbols in the production body with the input string**.

# Parse Tree for the input **id**+id\*id

$$E \rightarrow TE'$$

E

$$E' \rightarrow +TE' \mid \epsilon$$

$$T \rightarrow FT'$$

$$T' \rightarrow *FT' \mid \epsilon$$

$$F \rightarrow (E) \mid \text{id}$$

# Recursive Descent Parser

- It is a general category of top down parsing.
- Here, the production rule is chosen based on input symbol.
- It may require **backtracking** to correct a wrong choice

# Recursive Descent Parser

- $S \rightarrow cAd$   
 $A \rightarrow ab \mid a$
- Construct a parse tree top-down for the input string  $w = cad$

# Recursive Descent Parser

- $S \rightarrow cAd$   
 $A \rightarrow ab \mid a$
- Construct a parse tree top-down for the input string  $w = \text{cad}$
- Begin with a tree consisting of a single node labeled  $S$ , and the input pointer pointing to  $c$ , the first symbol of  $w$ .

$S$

# Recursive Descent Parser

- $S \rightarrow cAd$   
 $A \rightarrow ab \mid a$

- Construct a parse tree top-down for the input string  $w = cad$
- Begin with a tree consisting of a single node labeled  $S$ , and the input pointer pointing to  $c$ , the first symbol of  $w$ .  $S$  has only one production, so we use it to expand  $S$ .
- The leftmost leaf, labeled  $c$ , matches the first symbol of input  $w$ , so we advance the input pointer to  $a$ , the second symbol of  $w$ , and consider the next leaf, labeled  $A$ .

# Recursive Descent Parser

- $S \rightarrow cAd$   
 $A \rightarrow ab \mid a$

- Construct a parse tree top-down for the input string  $w = cad$
- Begin with a tree consisting of a single node labeled  $S$ , and the input pointer pointing to  $c$ , the first symbol of  $w$ .  $S$  has only one production, so we use it to expand  $S$ .
- The leftmost leaf, labeled  $c$ , matches the first symbol of input  $w$ , so we advance the input pointer to  $a$ , the second symbol of  $w$ , and consider the next leaf, labeled  $A$ .
- Expand  $A$  using the first alternative  $A \rightarrow ab$
- First symbol  $a$  matches

# Recursive Descent Parser

- $S \rightarrow cAd$   
 $A \rightarrow ab \mid a$

- Construct a parse tree top-down for the input string  $w = cad$
- Begin with a tree consisting of a single node labeled  $S$ , and the input pointer pointing to  $c$ , the first symbol of  $w$ .  $S$  has only one production, so we use it to expand  $S$ .
- The leftmost leaf, labeled  $c$ , matches the first symbol of input  $w$ , so we advance the input pointer to  $a$ , the second symbol of  $w$ , and consider the next leaf, labeled  $A$ .
- Expand  $A$  using the first alternative  $A \rightarrow ab$
- First symbol  $a$  matches but **next symbol doesn't match. Reports failure.**

# Recursive Descent Parser

- $S \rightarrow cAd$   
 $A \rightarrow ab \mid a$

- Construct a parse tree top-down for the input string  $w = cad$
- Begin with a tree consisting of a single node labeled  $S$ , and the input pointer pointing to  $c$ , the first symbol of  $w$ .  $S$  has only one production, so we use it to expand  $S$ .
- The leftmost leaf, labeled  $c$ , matches the first symbol of input  $w$ , so we advance the input pointer to  $a$ , the second symbol of  $w$ , and consider the next leaf, labeled  $A$ .
- Expand  $A$  using the first alternative  $A \rightarrow ab$
- First symbol  $a$  matches but **next symbol doesn't match. Reports failure.**
- Try other alternative.  $A \rightarrow a$ .
- Now the input parses.

# Left-recursive grammar??

- A left-recursive grammar can cause a recursive-descent parser, even one with backtracking, to go into an infinite loop.
- That is, when we try to expand a nonterminal  $A$ , we may eventually find ourselves again trying to expand  $A$  without having consumed any input.

# FIRST and FOLLOW

- The construction of both top-down and bottom-up parsers is aided by two functions, FIRST and FOLLOW, associated with a grammar  $G$ .
- During top down parsing, FIRST and FOLLOW allow us to choose which production to apply, based on the next input symbol.
- During panic-mode error recovery, sets of tokens produced by FOLLOW can be used as synchronizing tokens.

# Compute FIRST

- To compute  $\text{FIRST}(X)$  for all grammar symbols  $X$ , apply the following rules until no more terminals or  $\epsilon$  can be added to any FIRST set.
1. If  $X$  is a terminal, then  $\text{FIRST}(X) = \{X\}$ .
  2. If  $X$  is a nonterminal and  $X \rightarrow Y_1 Y_2 \dots Y_k$  is a production for some  $k \geq 1$  then place  $a$  in  $\text{FIRST}(X)$  if for some  $i$ ,  $a$  is in  $\text{FIRST}(Y_i)$  and  $\epsilon$  is in all of  $\text{FIRST}(Y_1), \dots, \text{FIRST}(Y_{i-1})$ ; that is,  $Y_1 \dots Y_{i-1} \rightarrow \epsilon$ . If  $\epsilon$  is in  $\text{FIRST}(Y_j)$  for all  $j = 1, 2, \dots, k$ , then add  $\epsilon$  to  $\text{FIRST}(X)$ . For example, everything in  $\text{FIRST}(Y_1)$  is surely in  $\text{FIRST}(X)$ . If  $Y_1$  does not derive  $\epsilon$ , then we add nothing more to  $\text{FIRST}(X)$ , but if  $Y_1 \rightarrow \epsilon$ , then we add  $\text{FIRST}(Y_2)$ , and so on.
  3. If  $X \rightarrow \epsilon$  is a production, then add  $\epsilon$  to  $\text{FIRST}(X)$ .

# Example 1

- Given the production rules:  
 $S \rightarrow aABb$   
 $A \rightarrow c \mid \epsilon$   
 $B \rightarrow d \mid \epsilon$   
 $\text{FIRST}(S) =$   
 $\text{FIRST}(A) =$   
 $\text{FIRST}(B) =$

# Example 1

- Given the production rules:  
 $S \rightarrow aABb$   
 $A \rightarrow c \mid \epsilon$   
 $B \rightarrow d \mid \epsilon$   
 $\text{FIRST}(S) = \{a\}$   
 $\text{FIRST}(A) = \{c, \epsilon\}$   
 $\text{FIRST}(B) = \{d, \epsilon\}$

# Example 2

- Given the production rules:  
 $S \rightarrow aBDh$   
 $B \rightarrow cC$   
 $C \rightarrow bC / \epsilon$   
 $D \rightarrow EF$   
 $E \rightarrow g / \epsilon$   
 $F \rightarrow f / \epsilon$   
 $\text{FIRST}(S) =$   
 $\text{FIRST}(B) =$   
 $\text{FIRST}(C) =$   
 $\text{FIRST}(D) =$   
 $\text{FIRST}(E) =$   
 $\text{FIRST}(F) =$

# Example 2

- Given the production rules:  
 $S \rightarrow aBDh$   
 $B \rightarrow cC$   
 $C \rightarrow bC / \epsilon$   
 $D \rightarrow EF$   
 $E \rightarrow g / \epsilon$   
 $F \rightarrow f / \epsilon$
- $FIRST(S) = \{a\}$   
 $FIRST(B) = \{c\}$   
 $FIRST(C) = \{b, \epsilon\}$   
 $FIRST(D) = \text{??????}$   
 $FIRST(E) = \{g, \epsilon\}$   
 $FIRST(F) = \{f, \epsilon\}$

# Example 2

- Given the production rules:  
 $S \rightarrow aBDh$   
 $B \rightarrow cC$   
 $C \rightarrow bC / \epsilon$   
 $D \rightarrow EF$   
 $E \rightarrow g / \epsilon$   
 $F \rightarrow f / \epsilon$
- $FIRST(S) = \{a\}$   
 $FIRST(B) = \{c\}$   
 $FIRST(C) = \{b, \epsilon\}$   
 **$FIRST(D) = \{ FIRST(E) - \epsilon \} \cup FIRST(F)$**   
 $FIRST(E) = \{g, \epsilon\}$   
 $FIRST(F) = \{f, \epsilon\}$

# Example 2

- Given the production rules:
    - $S \rightarrow aBDh$
    - $B \rightarrow cC$
    - $C \rightarrow bC / \epsilon$
    - $D \rightarrow EF$
    - $E \rightarrow g / \epsilon$
    - $F \rightarrow f / \epsilon$
- $FIRST(S) = \{a\}$   
 $FIRST(B) = \{c\}$   
 $FIRST(C) = \{b, \epsilon\}$   
 $FIRST(D) = \{ FIRST(E) - \epsilon \} \cup FIRST(F)$   
 $\quad = (\{g, \epsilon\} - \epsilon) \cup \{f, \epsilon\}$   
 $\quad = \{g, f, \epsilon\}$   
 $FIRST(E) = \{g, \epsilon\}$   
 $FIRST(F) = \{f, \epsilon\}$

# Example 3

- Given the production rules:  
 $S \rightarrow i E t S S' \mid a$   
 $S' \rightarrow e S \mid \epsilon$   
 $E \rightarrow b$   
 $\text{FIRST}(S) =$   
 $\text{FIRST}(S') =$   
 $\text{FIRST}(E) =$

# Example 3

- Given the production rules:  
 $S \rightarrow i E t S S' \mid a$   
 $S' \rightarrow e S \mid \epsilon$   
 $E \rightarrow b$   
 $\text{FIRST}(S) = \{i, a\}$   
 $\text{FIRST}(S') = \{e, \epsilon\}$   
 $\text{FIRST}(E) = \{b\}$

# Example 4

- Given the production rules:  
 $S \rightarrow A a$   
 $A \rightarrow BD$   
 $B \rightarrow b \mid \epsilon$   
 $D \rightarrow d \mid \epsilon$   
 $\text{FIRST}(S) =$   
 $\text{FIRST}(A) =$   
 $\text{FIRST}(B) =$   
 $\text{FIRST}(D) =$

# Example 4

- Given the production rules:  
 $S \rightarrow A a$   
 $A \rightarrow BD$   
 $B \rightarrow b \mid \epsilon$   
 $D \rightarrow d \mid \epsilon$   
 $\text{FIRST}(S) = \text{?????}$   
 $\text{FIRST}(A) = \text{?????}$   
 $\text{FIRST}(B) = \{b, \epsilon\}$   
 $\text{FIRST}(D) = \{d, \epsilon\}$

# Example 4

- Given the production rules:  
 $S \rightarrow A a$   
 $A \rightarrow BD$   
 $B \rightarrow b \mid \epsilon$   
 $D \rightarrow d \mid \epsilon$   
 $\text{FIRST}(S) = \text{?????}$   
 $\text{FIRST}(A) = \{\text{FIRST}(B) - \epsilon\} \cup \text{FIRST}(D)$   
 $\quad = \{b, d, \epsilon\}$   
 $\text{FIRST}(B) = \{b, \epsilon\}$   
 $\text{FIRST}(D) = \{d, \epsilon\}$

# Example 4

- Given the production rules:  
 $S \rightarrow A a$   
 $A \rightarrow BD$   
 $B \rightarrow b \mid \epsilon$   
 $D \rightarrow d \mid \epsilon$
- $\text{FIRST}(S) = \{\text{FIRST}(A) - \epsilon\} \cup \text{FIRST}(a)$   
 $= \{b, d, a\}$
- $\text{FIRST}(A) = \{\text{FIRST}(B) - \epsilon\} \cup \text{FIRST}(D)$   
 $= \{b, d, \epsilon\}$
- $\text{FIRST}(B) = \{b, \epsilon\}$
- $\text{FIRST}(D) = \{d, \epsilon\}$

# Example 5

- Given the production rules:  
 $E \rightarrow TE'$   
 $E' \rightarrow + TE' \mid \epsilon$   
 $T \rightarrow FT'$   
 $T' \rightarrow * FT' \mid \epsilon$   
 $F \rightarrow ( E ) \mid id$
- FIRST(E) =  
FIRST(E') =  
FIRST(T) =  
FIRST(T') =  
FIRST(F) =

# Example 5

- Given the production rules:  
 $E \rightarrow TE'$   
 $E' \rightarrow + TE' \mid \epsilon$   
 $T \rightarrow FT'$   
 $T' \rightarrow * FT' \mid \epsilon$   
 $F \rightarrow ( E ) \mid id$   
 $FIRST(E) = \{ (, id \}$   
 $FIRST(E') = \{ +, \epsilon \}$   
 $FIRST(T) = \{ (, id \}$   
 $FIRST(T') = \{ *, \epsilon \}$   
 $FIRST(F) = \{ (, id \}$

# Example 5

- Given the production rules:  
 $E \rightarrow TE'$   
 $E' \rightarrow + TE' \mid \epsilon$   
 $T \rightarrow FT'$   
 $T' \rightarrow * FT' \mid \epsilon$   
 $F \rightarrow ( E ) \mid id$
- $FIRST(E) = \{ (, id \}$   
 $FIRST(E') = \{ +, \epsilon \}$   
 $FIRST(T) = FIRST(F) = \{ (, id \}$   
 $FIRST(T') = \{ *, \epsilon \}$   
 $FIRST(F) = \{ (, id \}$

# Example 5

- Given the production rules:  
 $E \rightarrow TE'$   
 $E' \rightarrow + TE' \mid \epsilon$   
 $T \rightarrow FT'$   
 $T' \rightarrow * FT' \mid \epsilon$   
 $F \rightarrow ( E ) \mid id$   
 $FIRST(E) = FIRST(T) = \{ (, id \}$   
 $FIRST(E') = \{ +, \epsilon \}$   
 $FIRST(T) = FIRST(F) = \{ (, id \}$   
 $FIRST(T') = \{ *, \epsilon \}$   
 $FIRST(F) = \{ (, id \}$

# Example 6

- Given the production rules:  
 $S \rightarrow ACB \mid CbB \mid Ba$   
 $A \rightarrow da \mid BC$   
 $B \rightarrow g \mid \epsilon$   
 $C \rightarrow h \mid \epsilon$   
 $FIRST(S) =$   
 $FIRST(A) =$   
 $FIRST(B) =$   
 $FIRST(C) =$

# Example 6

- Given the production rules:

$S \rightarrow ACB \mid CbB \mid Ba$

$A \rightarrow da \mid BC$

$B \rightarrow g \mid \epsilon$

$C \rightarrow h \mid \epsilon$

$\text{FIRST}(S) = \text{????}$

$\text{FIRST}(A) = \text{????}$

$\text{FIRST}(B) = \{ g, \epsilon \}$

$\text{FIRST}(C) = \{ h, \epsilon \}$

# Example 6

- Given the production rules:

$S \rightarrow ACB \mid CbB \mid Ba$

$A \rightarrow da \mid BC$

$B \rightarrow g \mid \epsilon$

$C \rightarrow h \mid \epsilon$

$FIRST(S) = \text{????}$

$FIRST(A) = FIRST(da) \cup FIRST(BC)$

$= \{d\} \cup \{FIRST(B) - \epsilon\} \cup FIRST(C)$

$= \{d, g, h, \epsilon\}$

$FIRST(B) = \{g, \epsilon\}$

$FIRST(C) = \{h, \epsilon\}$

# Example 6

- Given the production rules:

$S \rightarrow ACB \mid CbB \mid Ba$

$A \rightarrow da \mid BC$

$B \rightarrow g \mid \epsilon$

$C \rightarrow h \mid \epsilon$

$$\begin{aligned}\text{FIRST}(S) &= \text{FIRST}(ACB) \cup \text{FIRST}(CbB) \cup \text{FIRST}(Ba) \\ &= \{\text{FIRST}(A) - \epsilon\} \cup \{\text{FIRST}(C) - \epsilon\} \cup \text{FIRST}(B) \\ &\quad \cup \{\text{FIRST}(C) - \epsilon\} \cup \text{FIRST}(bB) \\ &\quad \cup \{\text{FIRST}(B) - \epsilon\} \cup \text{FIRST}(a) \\ &= \{d, g, h\} \cup \{h\} \cup (g, \epsilon) \\ &\quad \cup \{h\} \cup \{b\} \cup \{g\} \cup \{a\} \\ &= \{d, g, h, b, a, \epsilon\}\end{aligned}$$

$$\begin{aligned}\text{FIRST}(A) &= \text{FIRST}(da) \cup \text{FIRST}(BC) \\ &= \{d\} \cup \{\text{FIRST}(B) - \epsilon\} \cup \text{FIRST}(C) \\ &= \{d, g, h, \epsilon\}\end{aligned}$$

$$\text{FIRST}(B) = \{g, \epsilon\}$$

$$\text{FIRST}(C) = \{h, \epsilon\}$$

# Example 6

- Given the production rules:

$$S \rightarrow ACB \mid CbB \mid Ba$$

$$A \rightarrow da \mid BC$$

$$B \rightarrow g \mid \epsilon$$

$$C \rightarrow h \mid \epsilon$$

$$\text{FIRST}(S) = \{a, b, d, g, h, \epsilon\}$$

$$\text{FIRST}(A) = \{d, g, h, \epsilon\}$$

$$\text{FIRST}(B) = \{g, \epsilon\}$$

$$\text{FIRST}(C) = \{h, \epsilon\}$$

$$\begin{aligned}\text{FIRST}(S) &= \text{FIRST}(ACB) \cup \text{FIRST}(CbB) \cup \text{FIRST}(Ba) \\ &= \{\text{FIRST}(A) - \epsilon\} \cup \{\text{FIRST}(C) - \epsilon\} \cup \text{FIRST}(B) \\ &\quad \cup \{\text{FIRST}(C) - \epsilon\} \cup \text{FIRST}(bB) \\ &\quad \cup \{\text{FIRST}(B) - \epsilon\} \cup \text{FIRST}(a) \\ &= \{d, g, h\} \cup \{h\} \cup \{g, \epsilon\} \\ &\quad \cup \{h\} \cup \{b\} \cup \{g\} \cup \{a\} \\ &= \{d, g, h, b, a, \epsilon\}\end{aligned}$$

$$\begin{aligned}\text{FIRST}(A) &= \text{FIRST}(da) \cup \text{FIRST}(BC) \\ &= \{d\} \cup \{\text{FIRST}(B) - \epsilon\} \cup \text{FIRST}(C) \\ &= \{d, g, h, \epsilon\}\end{aligned}$$

$$\text{FIRST}(B) = \{g, \epsilon\}$$

$$\text{FIRST}(C) = \{h, \epsilon\}$$

# Compute FOLLOW

- To compute FOLLOW(A) for all nonterminals A, apply the following rules until nothing can be added to any FOLLOW set.
  1. Place \$ in FOLLOW(S), where S is the start symbol, and \$ is the input right end marker
  2. If there is a production  $A \rightarrow \alpha B \beta$ , then everything in FIRST( $\beta$ ) except  $\epsilon$  is in FOLLOW(B)
  3. If there is a production  $A \rightarrow \alpha B$ , or a production  $A \rightarrow \alpha B \beta$  where FIRST( $\beta$ ) contains  $\epsilon$ , then everything in FOLLOW(A) is in FOLLOW(B).

# Example 1

- Given the production rules:

$S \rightarrow i E t S S' \mid a$

$S' \rightarrow e S \mid \epsilon$

$E \rightarrow b$

$\text{FOLLOW}(S) =$

$\text{FOLLOW}(S') =$

$\text{FOLLOW}(E) =$

# Example 1

- Given the production rules:

$S \rightarrow i E t S S' \mid a$

$S' \rightarrow e S \mid \epsilon$

$E \rightarrow b$

$\text{FOLLOW}(S) =$

$\text{FOLLOW}(S') =$

$\text{FOLLOW}(E) =$

$\text{FIRST}(S) = \{i, a\}$

$\text{FIRST}(S') = \{e, \epsilon\}$

$\text{FIRST}(E) = \{b\}$

[FIRST set](#)

# Example 1

- Given the production rules:

$S \rightarrow i E t S S' \mid a$

$S' \rightarrow e S \mid \epsilon$

$E \rightarrow b$

$FIRST(S) = \{i, a\}$

$FIRST(S') = \{e, \epsilon\}$

$FIRST(E) = \{b\}$

$FOLLOW(S) = \{\$ \}$

$FOLLOW(S') =$

$FOLLOW(E) =$

- For the start symbol  $S$ , place  $\$$  in  $FOLLOW(S)$ .

# Example 1

- Given the production rules:

$S \rightarrow i E t S S' \mid a$

$S' \rightarrow e S \mid \epsilon$

$E \rightarrow b$

$FIRST(S) = \{i, a\}$

$FIRST(S') = \{e, \epsilon\}$

$FIRST(E) = \{b\}$

$FOLLOW(S) = \{\$ \} \cup \{FIRST(S') - \epsilon\}$

$FOLLOW(S') =$

$FOLLOW(E) = \{t\}$

- For any production rule  $A \rightarrow \alpha B$ ,  
 $Follow(B) = Follow(A)$
- For any production rule  $A \rightarrow \alpha B \beta$ ,  
If  $\epsilon \notin First(\beta)$ , then  $Follow(B) = First(\beta)$   
If  $\epsilon \in First(\beta)$ , then  $Follow(B) = \{First(\beta) - \epsilon\} \cup Follow(A)$

# Example 1

- Given the production rules:

# Construction of a predictive parsing table

INPUT: Grammar  $G$ .

OUTPUT: Parsing table  $M$ .

METHOD: For each production  $A \rightarrow \alpha$  of the grammar, do the following:

1. For each terminal  $a$  in  $\text{FIRST}(\alpha)$ , add  $A \rightarrow \alpha$  to  $M[A, a]$ .
2. If  $\epsilon$  is in  $\text{FIRST}(\alpha)$ , then for each terminal  $b$  in  $\text{FOLLOW}(A)$ , add  $A \rightarrow \alpha$  to  $M[A, b]$ . If  $\epsilon$  is in  $\text{FIRST}(\alpha)$  and  $\$$  is in  $\text{FOLLOW}(A)$ , add  $A \rightarrow \alpha$  to  $M[A, \$]$  as well.

If, after performing the above, there is no production at all in  $M[A, a]$ , then set  $M[A, a]$  to **error** (which we normally represent by an empty entry in the table).

# EXAMPLE 1

$S \rightarrow aABb$

$A \rightarrow c \mid \epsilon$

$B \rightarrow d \mid \epsilon$

# LL(1) Grammar

- Predictive parsers, that is, recursive-descent parsers needing no backtracking, can be constructed for a class of grammars called **LL(1)**.
- The **first "L"** in LL(1) stands for **scanning the input from left to right**, the **second "L"** for producing a **leftmost derivation**, and the **"1"** for using **one input symbol of look-a-head at each step** to make parsing action decisions.
- For every LL(1) grammar, each parsing-table entry uniquely identifies a production or signals an error.
- LL(1) grammars are not ambiguous and not left-recursive.

# LL(1) Grammar

A grammar  $G$  is LL(1) if and only if whenever  $A \rightarrow \alpha \mid \beta$  are two distinct productions of  $G$ , the following conditions hold:

1. For no terminal  $a$  do both  $\alpha$  and  $\beta$  derive strings beginning with  $a$ .
2. At most one of  $\alpha$  and  $\beta$  can derive the empty string.
3. If  $\beta$  derives  $\epsilon$  then  $\alpha$  does not derive any string beginning with a terminal in  $\text{FOLLOW}(A)$ . Likewise, if  $\alpha$  derives  $\epsilon$  then  $\beta$  does not derive any string beginning with a terminal in  $\text{FOLLOW}(A)$ .

The first two conditions are equivalent to the statement that  $\text{FIRST}(\alpha)$  and  $\text{FIRST}(\beta)$  are disjoint sets.

The third condition is equivalent to stating that if  $\epsilon$  is in  $\text{FIRST}(\beta)$ , then  $\text{FIRST}(\alpha)$  and  $\text{FOLLOW}(A)$  are disjoint sets, and likewise if  $\epsilon$  is in  $\text{FIRST}(\alpha)$ , then  $\text{FIRST}(\beta)$  and  $\text{FOLLOW}(A)$  are disjoint sets.

# EXAMPLE 4
